
MEHERZAD SUKHESWALA

Boston, MA 02119 ♦ +1 (857) 233-6256 ♦ meherzads27@gmail.com ♦ [LinkedIn](#) ♦ [Portfolio](#)

PROFESSIONAL SUMMARY

Master of Science in Business Analytics from Northeastern University with a focus on requirements gathering, SQL, and dashboard development for business decision support. Writes SQL against PostgreSQL, builds Power BI and Tableau reporting on operational datasets, documents solutions as BRDs and process flows, and architects agentic AI systems in Python with FastAPI. Focused on Business Analyst and Data Analyst work where validated data and clear documentation shorten the path to a decision.

EDUCATION

Master of Science: Business Analytics 09/2024 to 12/2025

Northeastern University - Boston, MA, United States

Relevant coursework: Predictive Modeling, Machine Learning, Database Management, Statistics, R, Python, SQL, MS Excel, Pivot Tables, Slicers, Tableau, Power BI, Supply Chain Analytics, Demand Planning, Operations, Forecasting.

Bachelor of Technology: Mechatronics Engineering 09/2020 to 05/2024

SRM Institute of Science and Technology - Chennai, Tamil Nadu, India

Relevant Coursework: Pneumatics, Hydraulics, PLC Programming, OpenCV, Microcontrollers, Microprocessors, Raspberry Pi, Ansys, Creo Parametric, SolidWorks, AutoCAD, Automation, MATLAB, Machining, Control Systems, Sensors, IoT.

PROFESSIONAL EXPERIENCE

Clean Harbors, Inc. – Norwell, Massachusetts 09/2025 to 12/2025

Business Data Analyst

- Analyzed procurement workflows across 3 ERP systems to gather requirements and identify process inefficiencies, proposing automation rules and document categorization logic that removed redundant manual steps from order intake.
- Applied root cause analysis to shipment tracking discrepancies between KPP, Rail Hub, and Rail Connect, identifying 15+ data mapping inconsistencies that caused duplicate entries and delayed downstream order processing.
- Designed an end to end data pipeline across KPP, Rail Hub, and Rail Connect, introducing unique global shipment IDs for shared attributes to eliminate manual data entry and ensure accurate automatic transfer between systems.

AnalyticsAI – Plymouth, Minnesota 05/2025 to 08/2025

Business and AI Analyst | [App Link](#)

- Built 4 ML models in Scikit-Learn and XGBoost covering Linear Regression, Logistic Regression, and Random Forest, then applied model evaluation metrics of accuracy, precision, recall, and AUC to select the final model.
- Generated a 10,000 row synthetic dataset in Python by applying demographic, behavioral, and sales funnel logic rules, supporting KPI development and predictive model training for the insurance lead scoring model build.
- Tracked 5 KPIs inside a deployed Streamlit application connected to Azure Cosmos DB, covering total leads, policies purchased, conversion rate, tier distribution, and geographic breakdown for sales manager reporting.
- Documented business requirements (BRD) and functional specifications (FRD) for the lead scoring pipeline, defining data inputs, model logic, and output formats to enable a structured handoff for production deployment.

PROJECTS

Credit Card Analytics Dashboard | Power BI | [Link](#)

- Designed a SQL integrated Power BI dashboard tracking 8+ KPIs for credit card operations, including weekly revenue trends, customer demographics, transaction volumes, and regional contribution breakdowns by state.
- Built a data pipeline ingesting 4 Excel sources into PostgreSQL, applying SQL joins and aggregations to resolve schema inconsistencies and build a unified fact table before connecting the cleaned dataset to Power BI.
- Delivered insights to non technical stakeholders showing which customer segments and card types drove revenue, enabling the marketing team to reallocate budget from equal spend to segment targeted investment by card type.

Healthcare Agentic AI System | Python, FastAPI, Docker | [Link](#)

- Architected a 76 agent dental encounter platform in Python, coordinating 8 domain orchestrators from booking through the payer remittance across 82 pipeline steps, with 17 human approval gates wired on a single pause and resume primitive.
- Delivered 212 passing tests across 23 files running in under 3 seconds with no network calls, gated in CI on Python 3.11 and 3.12 alongside a Docker build that boots the container and health checks it before any deploy.
- Modeled 669 administrative hours reclaimed per year for a single practice at 5,000 encounters, roughly 0.33 of an FTE and \$31K to \$54K in staff time and avoided denial rework, derived from published CAQH and Premier benchmarks.

SKILLS

- **Technical Skills:** Business Analysis, Requirements Gathering, BRD, FRD, Process Mapping, Data Analysis, SQL, Python, R, Data Engineering, Data Pipelines, Data Modeling, Data Validation, Dashboard Development, KPI Development, Reporting, Business Intelligence, Machine Learning, Prompt Engineering, LLM Integration, Predictive Modeling, Agentic AI, Statistics.
- **Software & Tools:** Microsoft Excel (Advanced), Pivot Tables, Slicers, Power BI, Tableau, DAX, PostgreSQL, Lucidchart, Streamlit, GitHub, Azure Cosmos DB, FastAPI, Docker, Anthropic Claude, MCP, Scikit-Learn, XGBoost, Jira, Confluence, ERP Systems.
- **Soft Skills:** Stakeholder Communication, Collaboration, Problem Solving, Critical Thinking, Analytical Skills.
